

APARNA K V

Full-Stack Developer (React.js | Python)

+91 8921080560 | aparnasayikv1999@gmail.com | Chennai, India | [LinkedIn](#) | Portfolio

PROFESSIONAL SUMMARY

Full-Stack Developer with 4+ years of experience building scalable web and mobile applications using React.js, JavaScript (ES6+), TypeScript, and Python (FastAPI). Hands-on experience developing and integrating REST APIs, working with PostgreSQL, and building AI-powered features including AI content generation, grounding/validation pipelines, and AI agent workflows. Strong background in Agile/Scrum delivery, unit testing, CI/CD, and cross-functional collaboration with design, QA, and product teams across SaaS, geospatial, and healthcare domains.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, Python, HTML5, CSS3, SQL

Frontend: React.js, React Native, Redux, Context API, Tailwind CSS, Material UI, Bootstrap

Backend & Databases: Python, FastAPI, REST API Design & Integration, PostgreSQL, Node.js-based services (integration)

AI / ML Integration: AI Content Generation, Grounding & Content Validation Workflows, AI Agent Development

Cloud & Testing: AWS, Microsoft Azure, React Testing Library, Cypress

Tools & DevOps: Git, GitHub, CI/CD Pipelines, JIRA, Agile/Scrum, Code Reviews, Debugging

PROFESSIONAL EXPERIENCE

Senior Engineer | Zylen Solutions Pvt Ltd (Remote)

Nov 2023 - Present

Project: TopGeo — AI-Powered Geospatial SaaS Platform

Enterprise geospatial platform enabling AI-generated, SEO-optimized landing pages at scale via a CMS-style page builder.

- Developed and maintained a Python FastAPI service powering the CMS's AI content agent, including API endpoints backed by PostgreSQL for storing and retrieving AI-generated content and metadata.
- Built the end-to-end grounding workflow (AI content generation → validation → user review → approval → publish) and the Recommended Facts module, including a fix for rejected facts reappearing.
- Fixed data-integrity issues in the Geo Score module (score resetting to null after re-grounding) and a formatting regression where deleting a page altered fonts/logos on the summary page.
- Built and redesigned a reusable, component-based landing page system supporting independent, section-by-section updates across dozens of location pages.
- Developed React.js/TypeScript/Redux UI for the CMS and integrated REST APIs with Python-based backend services, collaborating on API contracts and SEO metadata/URL structures.
- Participated in PR reviews, sprint planning, and Agile ceremonies; supported feature testing and production deployments.

Project: Zylen Healthcare — Hospital Management System

Hospital management platform digitizing patient admission, ward/bed management, billing, discharge, and AI-assisted nursing workflows.

- Built React.js/TypeScript/Redux modules for patient admission, department selection, and doctor assignment across 5 user roles (Receptionist, Nurse, Doctor, Admin, Billing Staff).
- Developed Ward and Bed Management UI (listing, creation, assignment, transfer, status tracking); integrated Bed APIs end-to-end and resolved production issues in the admission-bed allocation flow.
- Built Inpatient/Outpatient Billing UI and analyzed the Discharge Summary workflow, mapping fields (diagnosis, treatment, medications, doctor sign-off) from admission, clinical, pharmacy, and lab data.
- Explored and prepared test scenarios for Nurse AI, an AI-assisted nursing module covering ward rounds, clinical observations, AI-generated notes, and discharge assistance.

UK-based banking platform (LBG) digitization and e-commerce projects.

- Built a Test-Driven Development (TDD) application for digitizing a UK-based banking platform, achieving 70% reusable components via front-end microservices architecture.
- Developed React.js components consuming REST APIs, worked with complex data models, and integrated authentication systems into the application.
- Designed and implemented a dynamic AI-style playground system featuring prompt reloading, a chat interface, and interactive customer sessions.
- Wrote unit tests, followed Agile/Scrum methodologies, and collaborated with backend teams to integrate and validate REST APIs.

EDUCATION

Post Graduate Certificate in Cloud Computing — California Institute of Technology (Online)

Bachelor of Engineering (B.E.) — R V S College of Engineering and Technology, Coimbatore, India

CERTIFICATIONS

- AWS Solution Architect (PGCC) • Oracle SQL Certification (Complete)
- Microsoft Certified: Azure Administrator (AZ-104) • Designing Microsoft Azure Infrastructure Solutions (AZ-305)
